CANCEL   SAVE

- Enter the data required for the product and save.
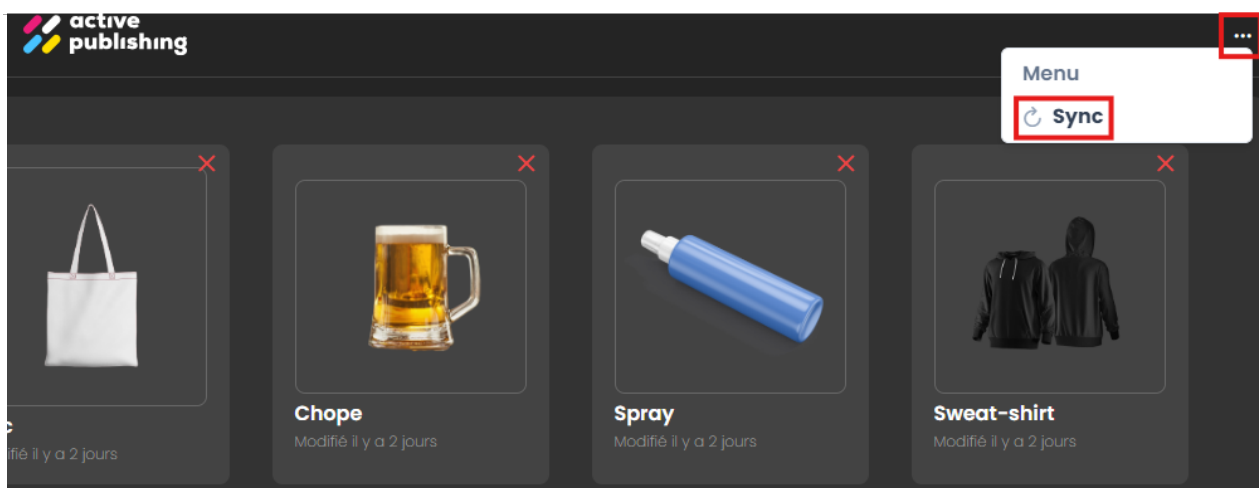

You will find your article in the category to which it has been linked.

Synchronising the solution with the PIM

To synchronise your products from Akeneo to Active Goodies, click on the dots at the top right of your screen in the back office.

Back-Office

When you log on for the first time, a wizard will guide you through the various functions.

On Active Goodies, in edit mode, you can define the branding area for your item. To get started, import the logo that will make it easier to set the perspective of your branding zone.
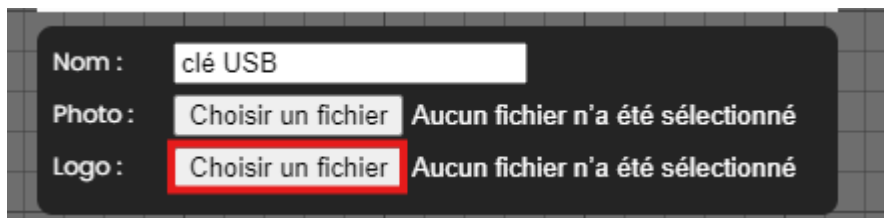

Once imported, you can position your logo, which will serve as an example for the branding area. You can move and modify your branding area by clicking on 'Go to Warp', to manage the perspective, and 'Go to Resize' to resize and move your branding area. You can preview the result by clicking on 'Go to Preview'.

Once your zone has been defined, you can go into the shop to simulate what end users will see when they choose this item for personalisation.

This allows you to check how it will look with different types of logo (in width or height) and, if necessary, correct the branding zone in the back office so that the final result is correct. You can see your branding area in orange on the product.

Marquage   Boutique

In the shop, customers can import a logo and have it rendered directly on the product. They will no longer have to position their logo in the branding zone that you have defined beforehand.

The solution is compatible with most CMS and websites. It provides getter and setter functions to retrieve all the information required for the order (file, dimensions, positioning, etc.).
The shop is just one example of the functions available, and a setup is required to configure all the information you need.

When the order is validated, the solution generates a document containing the final rendering of the customised product, in PDF or JPG format, which can be used to generate an order form, an invoice, etc.
In the example, an invoice is generated.

CMS integration

To implement the Active Goodies solution on your website, follow the procedure described below.

Installation :

1. Import the script (makes the webcomponent available in the application) Import the script in the header of your template or in the body of your web page. This will make the webcomponent available in the website.
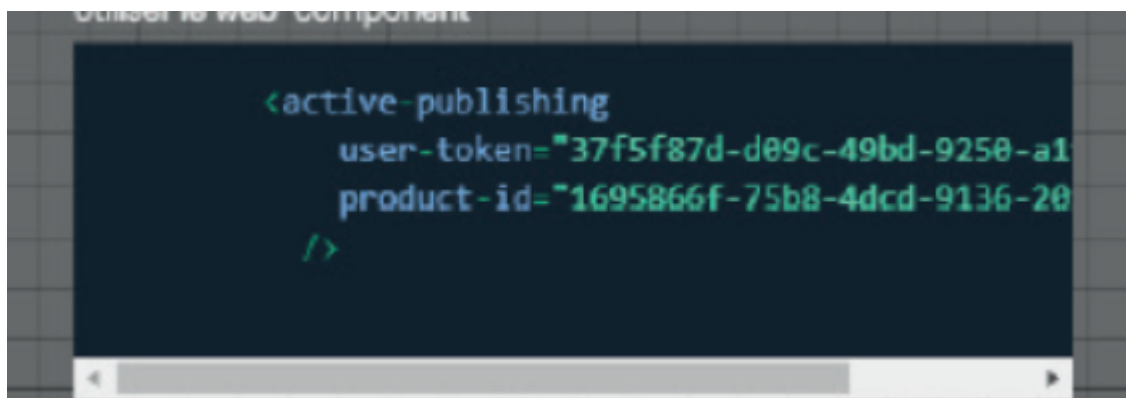

"< script src=""https://activepublishing.fr/scripts/mockup.js""></script>"
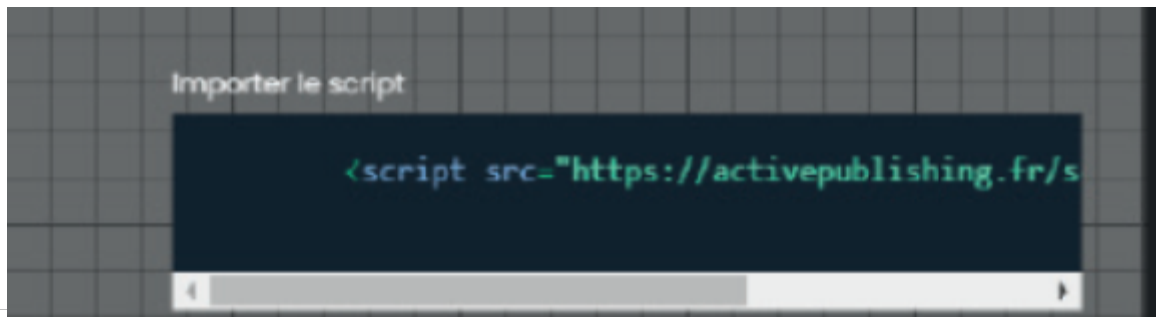

2. Load the web-component where you want it in the page.

Place the following code in the body of your page to load the web-component where you want it.

```
<active-publishing
        product-id="1695866f-75b8-4dcd-9136-20197148b778"
/>
```

A token and a product-id' will be sent to you so that you can implement the solution in your CMS or website.

Example of how to use the methods :

To retrieve marking information to store or communicate it for the production of the custom product, use the methods as described in the example below. These methods allow you to communicate with the webcomponent and retrieve or send it any necessary information. The full list of available methods will be available in your personal space on our website. This list will evolve according to the needs of the project.

```
const activePublishing = document.getElementById('activePublishing');
activePublishing.getRender();
activePublishing.getPosition();
activePublishing.setLogo(mylogo);
```
